

General Motors Hamtramck Project

PROJECT SUMMARY

Location
Hamtramck, Michigan, USA

Project Type
22 Bay Addition – Facilities
Construction Management of Plant
Projects Including Seat Stripper
Building Bumpout and Building
Infill for More Streamlined Material
Handling Operation

Planned Investment
\$15 Million

Current Global Performance Role
Program Management
Construction Management

Project Highlights

As part of a multi-phase program including various projects for extensive model change, Global Performance successfully finished a three-bay addition to house a new seat stripper conveyor, relocated various offices during plant shutdowns, and performed miscellaneous demolition work during a ten-month period in 2004. The program was cancelled prior to the start of a larger nineteen-bay addition for undisclosed reasons.
